PROGRAM DESCRIPTIONS:

APPLIED BEHAVIORAL ANALYSIS (ABA Consulting) is a behavioral support designed to monitor a child's social behavior in a particular environment to determine which factors are influencing that behavior in order to bring positive change in social environments.

BLENDED CASEMANAGEMENT-- services to adults and children who suffer from a serious mental illness or emotional disturbance. The case manager works with the individual and families to access, link, coordinate and monitor needed services as well as provide support and advocacy. The primary goal of these services is to maintain the consumer in the least restrictive and most normal setting possible while insuring the individual remains linked to the necessary services.

CLOZARIL CLINIC - Clozaril is a potent atypical antipsychotic medication that requires very close monitoring. The Clozaril Clinic is designed to provide intensive medication support to those designated chronic and pervasively mentally ill clients who have been treatment resistant to other antipsychotic medications.

EARLY & PERIODIC SCREENING, DIAGNOSIS & TREATMENT (EPSDT) BEHAVIORAL HEALTH REHABILITATION (BHR) SERVICES --provides expert professional behavioral intervention directly to the child, right in the child's own home, school or community.

EXTRA MILE FOR FAMILIES (EMF) services include crisis intervention (24 hours a day, 7days a week), individual therapy, family therapy, case management, family support, respite care, advocacy, and interagency collaboration. These services are offered by a team composed of a master's level therapists and bachelor's level mental health workers in the family's home, the child's school and in the community.

FAMILY BASED MENTAL HEALTH (FBMH) PROVIDERS provides services necessary to enable children and their families a safe and secure environment that promotes keeping families together and reducing the need for psychiatric hospitalizations or residential services for their children. The program is voluntary and services are team delivered. The services are designed to be short term and high intensity, but the length of services will vary based on the needs of the family. Also, there is a 24-hour a day/7-day a week crisis hotline available to families. Average length of time for this service is eight months.

FAMILY STABILIZATION similar services as Family Based but is shorter in length, typically three months.

FAMILY UNITY the program is team delivered, comprehensive in nature, incorporating intensive strengths-based in-home therapy, case management services, family support services, and twenty-four hour/seven day availability for crisis stabilization.

FUNCTIONAL FAMILY THERAPY PROGRAM is comprehensive evidence based family intervention used in helping at risk youth and their families. The main objectives are to strengthen and maintain the family, increase communication, problem solving, conflict resolution, and family relationships.

INTENSIVE OUTPATIENT PROGRAM (IOP)-- An intermediate level of mental health care. Individuals are seen as a group 2 to 5 times a week (depending on the structure of the program) for 2 to 3 hours at a time. It is designed to help individuals who do not

require hospitalization, but can benefit from participation in a structured therapeutic environment. This strategy addresses mental and emotional health needs and provides a supportive and caring environment.

MAINTAINING STRENGTHS PROGRAM services main objectives are to strengthen and maintain the family, improve coping skills, teach family members to care for their child/adolescent, and to serve as an advocate for the child/adolescent. Enables parents/caregivers to care for their mentally ill or emotionally disturbed children/adolescents at home. This treatment model involves intensive family therapy services. The clinician's main focus is with the entire family system. The main focus of treatment is with the child/adolescent and family strengths. The program is individually delivered by a masters level therapist with collaborative-like services including planning, assessment, service linkages, and referrals

MEDICAL/PSYCHIATRIC CLINIC –is a primary care/internal medicine and psychiatric medicine practice. Patients 14 and older who are looking for a primary care physician and also have a mental health illness.

MOBILE MENTAL HEALTH program brings diagnostic and treatment services straight to those who cannot seek outpatient care on their own. People get care where they are - at home

OUTPATIENT-- The Outpatient Mental Health Clinic may offer a variety of mental health services for adults, teens, and children. These services may include Individual Psychotherapy, Family and Couples Therapy, Medication Evaluation and Consultation and Psychological Testing.

PARTIAL HOSPITALIZATION PROGRAMS-- the patient continues to reside at home, but commutes to a treatment center up to five days a week. Since partial hospitalization focuses on overall treatment of the individual, rather than purely safety, the program is not used for acutely suicidal people.

PEER SPECIALIST PROGRAM—a person who has progressed in their own recovery and is working to assist other people with a mental disorder. Because of their life experience, such persons have expertise that professional training cannot replicate. Certified Peer Specialists meet a person whenever he or she is in the recovery process and often help behavioral health consumers understand their illness and plan their recovery. Their role is to work closely with an individual's other services and assist the person in developing her or her recovery plan.

PSYCHIATRIC REHABILITATION-- is the process of restoration of community functioning and wellbeing of an individual who has a psychiatric disability. Rehabilitation work undertaken by psychiatrists, social workers and other mental health professionals (psychologists and social workers, for example) seeks to effect changes in a person's environment and in a person's ability to deal with his/her environment, so as to facilitate improvement in symptoms or personal distress. These services often "combine pharmacologic treatment, independent living and social skills training, psychological support to clients and their families, housing, vocational rehabilitation, social support and network enhancement, and access to leisure activities.

STEPPING STONES PROGRAM provides quality, specialized services for children and adolescents diagnosed with an Autism Spectrum Disorder (ASD) between the ages of 3-7 and 8-14. This 52-week alternative program is designed to be a “step-down” from traditional 1:1 in-home BHRS services and can be offered in preparation for transition to school/group programs, as a complement to half-day school programs, or as an after-school or summer program.

Target skill areas include: independence, communication skills, parallel and interactive play skills, peer interaction, transitioning, sensory integration, self-awareness, environmental awareness, attention to task, and problem-solving.

TELEPSYCHIATRY-- videoconferencing between the facility, patient, and the psychiatrist, especially for follow-up.

THERAPEUTIC FAMILY CARE This program is designed to provide a unique treatment environment for children between to the ages of 3 and 19. The treatment foster families work collaboratively with the treatment team of professionals to create treatment goals and interventions that are uniquely tailored to meet the child's need and accentuate their strengths. Services include individual and family therapy, monthly treatment meetings, case management, community supervision, integration of treatment goals within the school and ongoing behavioral healthcare to include medication management. The treatment foster families are supported 24hrs/day, 7 days per week.
